

CYBERSECURITY AUDIT REPORT

Botium Toys – Internal Security Assessment

Prepared by: Caleb Omojowo

Role: Aspiring Cybersecurity Analyst

Date: April 2026

This report presents a structured cybersecurity audit highlighting risks, vulnerabilities, and compliance gaps within Botium Toys' IT environment. It demonstrates practical application of security auditing and risk assessment skills.

1. Executive Summary

This audit identified a high-risk security posture (8/10). Key issues include lack of encryption, weak access control, absence of backups, and incomplete compliance. Immediate remediation is required.

2. Risk Overview

Category	Status
Risk Score	8 / 10 (High)
Encryption	Not Implemented
Backups	Not Available
Access Control	Weak / Overexposed
Intrusion Detection	Not Implemented

3. Control Assessment

Control	Status
Firewall	Implemented
Antivirus	Implemented
CCTV / Physical Security	Implemented
Encryption	Missing
Backups	Missing
IDS	Missing
Least Privilege	Missing

4. Compliance Summary

PCI DSS: Non-compliant

GDPR: Partially compliant

SOC 1 & 2: Partially compliant

5. Recommendations

- Implement least privilege and RBAC
- Deploy encryption for sensitive data
- Introduce IDS and monitoring
- Establish backup and disaster recovery plans
- Enforce strong password policies and MFA

6. Conclusion

Botium Toys must address critical security gaps to reduce risk and achieve compliance. Implementing the recommended controls will significantly strengthen its cybersecurity posture.
